PROFESSIONAL SUMMARY

Completed first year of B.Tech in Computer Science and Engineering at IIIT Ranchi; commencing second year in August 2026. Builds complete, working programs rather than isolated exercises — including a data-driven inventory system in Python and three C++ console applications covering records management, text processing, and game logic. Comfortable with object-oriented design, file and data handling, and modular program structure. Seeking a software engineering internship to apply these fundamentals at scale.

EDUCATION

B.Tech in Computer Science and Engineering

2025 – 2029

Indian Institute of Information Technology Ranchi (IIIT Ranchi)

TECHNICAL SKILLS

Languages:	C++, Python	Python Libraries:	NumPy, Pandas, Matplotlib, Seaborn
Core CS:	OOP, File Handling, Data Structures, Algorithms	Tools:	Git, GitHub, VS Code, Excel
Currently Learning:	Data Structures & Algorithms (DSA), Competitive Programming, Machine Learning	Databases:	MySQL

PROJECTS

Inventory Management System

github.com/jasraj00100/Inventory-Management-System-V-1.0

Technologies: Python, Pandas

- Developed a console-based inventory management system in Python, using Pandas to structure, store, and manipulate product data.
- Implemented full CRUD functionality — adding, viewing, searching, updating, and deleting product records — through a menu-driven interface.
- Built automatic stock management logic that updates inventory quantities in real time as products are sold.

Student Record Management System

github.com/jasraj00100/Student-Record-Management-System

Technologies: C++

- Built a console-based system in C++ to store, search, and update student academic records.
- Implemented ranking logic to sort students by performance and generate pass/fail analysis across records.
- Designed class-level performance tracking by aggregating individual student data into summary statistics.

Text Analyzer V2

github.com/jasraj00100/Text-Analyzer-V2

Technologies: C++

- Developed a C++ text analysis tool that processes multi-line input and computes letter frequency, word count, digit count, and space count.
- Implemented character-level parsing logic to detect and classify special characters within arbitrary text.
- Structured the program to handle variable-length, multi-line input reliably.

3-in-1 Game Suite

github.com/jasraj00100/3in1Game

Technologies: C++

- Built a console-based suite of three games in C++ with a unified, menu-driven interface for game selection.
- Implemented randomization logic and score tracking shared across multiple game modes.
- Applied modular programming to separate game logic, scoring, and navigation into independent components.

ACHIEVEMENTS & ACTIVITIES

- 2nd Place — Desert Dash Competition, IIIT Ranchi — Competed under pressure and delivered strong problem-solving performance.
- 1st Place — FinFest 3.0 Quiz Competition — Secured top position in a multi-domain knowledge quiz.
- Competitive Programming: Learning Data Structures & Algorithms through C++ and regularly practicing problems on CodeChef.
