PROFESSIONAL SUMMARY

Second-year B.Tech Computer Science and Engineering student at IIIT Ranchi with hands-on experience building data analytics dashboards, Python-based applications, and C++ systems. Proficient in C++, Python, SQL, and Power BI; actively developing skills in Data Structures & Algorithms and Machine Learning. Seeking a software engineering or data-oriented internship to apply strong programming fundamentals to real-world problems.

EDUCATION

B.Tech in Computer Science and Engineering 2025 – 2029
Indian Institute of Information Technology Ranchi (IIIT Ranchi)

TECHNICAL SKILLS

Languages:	C++, Python	Data & Analytics:	NumPy, Pandas, Matplotlib, Seaborn, Power BI, DAX, Excel
Core CS:	OOP, Data Structures, Algorithms, File Handling	Tools & DB:	Git, GitHub, VS Code, MySQL

PROJECTS

OLA Ride Analytics Dashboard Technologies: Power BI, DAX - Designed a multi-page Power BI dashboard to analyze OLA ride data across bookings, revenue, cancellations, vehicle types, payment methods, and customer ratings. - Authored DAX measures to compute KPIs including booking success rate, revenue breakdowns, and per-vehicle-type average ratings. - Implemented slicers and cross-page filters to support drill-down analysis across multiple data dimensions.	github.com/jasraj00100/OLA-PowerBI-Dashboard
Inventory Management System Technologies: Python, Pandas - Built a console-based inventory system with full CRUD operations — add, view, search, update, and delete — via a menu-driven interface. - Used Pandas to structure and persist product records, with automatic stock quantity updates on each sale transaction.	github.com/jasraj00100/Inventory-Management-System-V-1.0
Student Record Management System Technologies: C++ - Developed a C++ console application to store, search, and update student academic records using object-oriented design. - Implemented performance ranking, pass/fail classification, and class-level summary statistics aggregated from individual records.	github.com/jasraj00100/Student-Record-Management-System
Text Analyzer V2 Technologies: C++ - Built a C++ tool to parse multi-line text input and compute letter frequency, word count, digit count, space count, and special character classification. - Structured the program to reliably process variable-length input using character-level parsing logic.	github.com/jasraj00100/Text-Analyzer-V2

ACHIEVEMENTS & ACTIVITIES

- 2nd Place — Desert Dash Competition, IIIT Ranchi — Delivered strong performance under pressure in a timed problem-solving contest.
- 1st Place — FinFest 3.0 Quiz Competition — Secured top position across a multi-domain competitive quiz.
- Competitive Programming — Actively solving Data Structures & Algorithms problems in C++ on CodeChef; following a structured progression roadmap.
